

Agent Hub Platform

Multi-Cloud AI Agent Orchestration

Build · Deploy · Monitor autonomous AI agents across AWS, Azure & GCP with native MCP support, vector databases, and real-time learning analytics.

■ Production Ready	■ MCP Native	■ Multi-Cloud	■ 300+ Agents
--------------------	--------------	---------------	---------------

Platform at a Glance

180K+	30+	6	300+
Lines of Code	API Endpoints	Vector DB Providers	Example Agents

Core Features

■ Multi-Agent Orchestration Production-grade workflow engine coordinates multiple AI agents in parallel or sequential pipelines with state management and error recovery.	■ Learning Analytics Engine Proprietary AI-powered system tracks interactions, measures user learning velocity, and generates personalized insights — no code changes required.
■ MCP Native Integration Deep Model Context Protocol support with 12 dedicated service files and Docker MCP servers. One of the few platforms with native MCP.	■ Vector Database Hub Unified interface for Pinecone, Weaviate, Qdrant, ChromaDB, OpenSearch, and PostgreSQL — switch providers without rewriting ingestion logic.
■ AI Cost Optimizer Automatic model routing: Claude Haiku for simple tasks, Sonnet for complex ones. Integrated AWS Cost Explorer shows real savings per execution.	■ Enterprise Security JWT + API key auth, RBAC (Admin/User/Viewer), Helmet headers, rate limiting, audit logging, and comprehensive request monitoring.

Technology Stack

Backend	Frontend	AI / Cloud
Node.js 18 · TypeScript Express.js · SQLite · Redis Docker · AWS Lambda	React 19 · TypeScript React Bootstrap 5 Recharts · React Router 7	Claude 3.5 Sonnet / Haiku AWS Bedrock · OpenAI · Gemini Pinecone · Weaviate · Qdrant

Integrations & Ecosystem

• AWS Bedrock · OpenAI · Google Gemini · Ollama (local)
• Pinecone · Weaviate · Qdrant · ChromaDB · OpenSearch · PostgreSQL
• GitHub · VS Code Extension · CLI Tool · MCP Protocol
• Docker · AWS Lambda · EC2 · LocalStack (dev)
• CrewAI · LangGraph · AutoGen · LangChain · Custom Agents

Use Cases

■ QA & Test Automation Auto-generate, execute, and track test cases across your entire codebase with AI-powered coverage analysis.	■ Security Scanning Continuous vulnerability detection, OWASP compliance checks, and remediation suggestions via agent workflows.
■ Business Intelligence Connect data sources, run analysis pipelines, and surface insights with natural language queries.	■ DevOps Automation Deployment readiness assessment, infra analysis, and CI/CD pipeline agents with GitHub integration.

Deployment Options

■ AWS Lambda	Serverless · Auto-scaling · Pay-per-execution
■ Docker Compose	Full local stack · LocalStack dev environment
■ EC2 / VPS	Traditional server · PM2 process management
■ Bedrock Managed	Native AWS integration · Cost-optimized routing

Market Opportunity

SaaS Revenue Potential	IP / Codebase Value	Target Buyers
\$50–\$500/mo per team Enterprise: \$2K–\$10K/mo Multi-tenant SaaS ready	\$100K–\$300K engineering Propriety analytics IP MCP-native differentiator	AWS / Azure / Google DevOps & TestOps platforms Enterprise automation vendors

■ *Currently open to partnerships, licensing discussions, and enterprise pilots. Building the future of autonomous AI agent infrastructure.*
